

Multiplying monomials and binomials

Multiply the following monomials and binomials and name the results

1) $-3a(4a - 1)$

2) $(c^3 + 3) \times 4c$

3) $(5x^3 - 5) \times 8x^2$

4) $(x^2 + 4) \times (-2x^3)$

5) $(6y)(-1 - y^1)$

6) $(-7x^4 + 2) \times 1x^1$

7) $-8m^2(3m^2 - 3)$

8) $10b^3 \times (b^2 + 4) \times -2b^2$

ANSWER SHEET

Multiply the following monomials and binomials and name the results

- | | | |
|--|------------------------------|-------------------------|
| 1) $-3a(4a - 1)$ | $\underline{-12a^2 + 3a}$ | Quadratic binomial |
| 2) $(c^3 + 3) \times 4c$ | $\underline{4c^4 + 12c}$ | Quartic binomial |
| 3) $(5x^3 - 5) \times 8x^2$ | $\underline{40x^5 - 40x^2}$ | Quintic binomial |
| 4) $(x^2 + 4) \times (-2x^3)$ | $\underline{-2x^5 - 8x^3}$ | Quintic binomial |
| 5) $(6y)(-1 - y^1)$ | $\underline{-6y^2 - 6y}$ | Quadratic binomial |
| 6) $(-7x^4 + 2) \times 1x^1$ | $\underline{-7x^5 + 2x}$ | Quintic binomial |
| 7) $-8m^2(3m^2 - 3)$ | $\underline{-24m^4 + 24m^2}$ | Quartic binomial |
| 8) $10b^3 \times (b^2 + 4) \times -2b^2$ | $\underline{-20b^7 - 80b^5}$ | Seventh degree binomial |
